

Orhan Kahraman

I graduated from the Computer Engineering program in 2023, and during my studies, I developed mobile applications using Flutter for two years, both in academic projects and for personal development. After graduation, I gained in-depth experience in frontend development by working with React, TypeScript, and Tailwind CSS to create modern web applications for one and a half years. As a software developer who aims to add value to projects with my technical skills and continuously improve myself, I am excited to participate in innovative projects and contribute even more.
